

THE VEST MAN

Why Wool is a Bad Idea for External Vest Carriers

- Have you ever worn a hole through on a wool shirt?? Now imagine how much faster a hole is going to wear through when wool is carrying four to six pounds of body armor! The material is not strong enough and will not last.
- Wool fades.
- Wool is not waterproof
- Wool gives off a horrible odor when it gets wet. Now imagine a wool vest lying against your wool shirt and having rain or perspiration between the two materials on a hot day.....
- Wool is not a durable material. The material we use is a great deal more durable, waterproof and fade proof, which is why we can offer a 5 year warranty.
- As far as color matching is concerned – we offer an array of colors that should meet your needs, and remember our colors won't fade, so they will always match your new uniform shirts.
